

To the responsible person

Hunzenschwil, 20th July 2020

RoHS Compliance

AGRO is aware that EU Directives 2011/65/EU and 2015/863/EU restrict the use of certain substances in electrical and electronic equipment.

This relates to the following substances:

- Lead
- Mercury
- Cadmium
- Hexavalent chromium
- PBB
- PBDE
- Flame retardants and plasticizers: DEHP, BBP, DBP and DIBP

Based on information provided by our suppliers and our current state of knowledge, we can make the following statement:

The content of the above-mentioned substances in our products, apart from as covered by Exemption **a)**, **does not exceed** the limits specified in the RoHS Directive.

a) Lead as an alloying element in our brass cable glands and brass accessories

For categories 1 to 7 and 10, exemption 6c Annex III applies until 21st July 2021, following which a reassessment will be carried out. For all other categories, the current exemption will continue to apply during the period of validity set out in Article 5 (2) of Directive 2011/65/EU.

Supplemental information and findings shall be considered by us and periodically included in our assessment. AGRO uses state-of-the-art materials and processes in its product development work, and takes ongoing developments into account.
